## A New Product from Nature Cure

BEE CAPS *PLUS*
Original BEE CAP formula
with ChromeMate™

Here's a new Bee Cap formulated with Chrome Mate™ to help you lose weight! Nature Cure took their winning formula for Bee Caps and added chromium.

"Chromium helps insulin transfer glucose and other nutrients from the bloodstream into cells", says Richard Anderson, a chromium expert at the United States Department of Agriculture. Chromium is necessary for insulin metabolism. It helps insulin move glucose from the bloodstream to the cells for cell energy. It can also help reduce symptoms of glucose intolerance. Because the form of chromium in many foods does not absorb easily, and Americans are notorious for their high sugar consumption, most of us do not get enough chromium in our diets. Bee Caps Plus supply that extra chromium our body needs.
Chromium helps to regulate your blood sugar levels so that you don't get cravings.

CHROMEMATE™

As reported by Jean Carper in USA Weekend Magazine, April 1-3 2005

"No magic bullet can stop our epidemic of type 2 diabetes, but certain supplements may help cut risk and alleviate symptoms:

Chromium picolinate. Taking 200 to 1,000 micrograms daily can lower blood glucose, improve insulin function and lessen diabetic symptoms such as thirst and fatigue, says expert Richard Anderson, Ph.D., of the U.S. Department of Agriculture. In recent Israeli research, taking 200mcg twice a day for three weeks reduced diabetics' blood glucose by 26% and cholesterol by 9%. Anderson advises all adults to take 200mcg chromium picolinate daily to help prevent diabetes. New studies have put old safety questions to rest."

Also, did you know that ChromeMate™ is the best form of Chromium Picolinate to take. The makers of ChromeMate™ insure that it is the fastest and most completely absorbed form of Chromium Picolinate thus insuring that you are really getting your daily dose. It costs us more to use it, but our policy is to deliver the best possible product!
